## **Executive Summary**

### Introduction

In 2004, Assembly Bill 1417 triggered the creation of a performance measurement system for the California Community Colleges (CCC). That legislation and ensuing budget action authorized the California Community Colleges Chancellor's Office (CCCCO) to design and implement a performance measurement system that contained performance indicators for the system and its colleges. As per legislative intent, the CCCCO collaborated with the system's colleges and advisory structure, a panel of national experts, the Legislative Analyst's Office, the Department of Finance, and the Secretary of Education to formulate this comprehensive system that has become known as "ARCC" (Accountability Reporting for the Community Colleges). In recognizing that the initial report in 2007 required the CCCCO to test innovative ideas about performance measurement and to use a massive state database, the CCCCO completed the 2007 ARCC report as a pilot report for the Legislature. The 2009 ARCC report builds upon the prior reports through various improvements in data quality and a new year of data.

### **Systemwide Performance**

This report will benefit policy makers by detailing many of the critical contributions that the California Community Colleges have made in recent years. The most notable findings at the state level include the following:

- Community college students who earned a vocational degree or certificate in 2002-2003 year saw their wages jump from \$28,087 (for the last year before receipt of the award) to \$55,828 three years after earning their degree (2006), an increase of 98.6%.
- A large number of Californians access and use the CCC system; participation rates are high, with 75 out of every 1,000 people in the state enrolled in a CCC in 2007-2008.
- The system enrolls more than one-fourth of all 20- to 24-year olds in California, with participation rates of 272.6 per 1,000 for 2007-2008.
- In 2007-2008, the system transferred 106,666 students to four-year institutions (public, private, in-state, and out-of-state).. The California State University (CSU) system continues as the most frequent transfer destination for community college students with the enrollment of 54,971 students from the community colleges. Nearly 14,000 community college students enrolled in the University of California (UC) system, the state's most selective public higher education system. This figure continues a four-year trend of increasing transfers to the UC system.
- Transfers during 2007-2008 to in-state-private institutions and all out-of-state institutions account for 23,322 and 13,755 transfers, respectively.

## **Executive Summary**

- In 2007-2008, the system contributed to the state's critical health care labor force, as more than 8,200 students earned degrees or certificates in nursing.
- The system's contribution in 2007-2008 to the state's workforce included more than 63,468 associate degrees and certificates in vocational/occupational areas.

## **College Level Performance**

The bulk of the ARCC report covers each college's performance on eight critical indicators.

The table below lists the seven indicators for which ARCC has complete data. These numbers are percentages of success among target populations that the colleges and the CCCCO jointly defined. As a quick snapshot of how the system has done on these indicators, this table displays the figures for the year in which the most recent data are available. If a person needs to analyze the performance of a specific community college, he/she should refer to the individual college rates that appear in the section for "College Level Indicators" rather than to these systemwide rates.

College Level Performance Indicator	State Rate
1. Student Progress & Achievement	51.8%
2. Completed 30 or More Units	71.2%
3. Fall to Fall Persistence	69.2%
4. Vocational Course Completion	77.7%
5. Basic Skills Course Completion	60.5%
6. ESL Course Improvement	50.1%
7. Basic Skills Course Improvement	51.2%

Because the ARCC indicators have unique definitions, we cannot compare these indicators to those generated for other states or by other studies of the California Community Colleges. The evaluation of individual college performance requires the use of the extensive tabulations that we cover next.

Each of the community colleges covered in this report has six pages of information to facilitate and stimulate discussions about college performance within each community. In these six pages per college, the report shows (1) the three-year trend for each of the

## **Executive Summary**

seven indicators; (2) the college profile (i.e., its enrollment demographics); (3) a comparison of its performance with a peer group (i.e., colleges that have similar environments that affect an indicator); and (4) a self-assessment by each college. Together, this information provides readers with a fair and comprehensive picture of the achievements at any community college—a picture that simple scorecards or rankings would fail to present.

The ensemble of information in the six pages must act jointly as the inputs for any evaluation of a college's performance. Each piece of information contributes something to an evaluation of performance. For example, the year-to-year information alerts us to any trends that may be occurring at a college. The peer grouping information gives us a useful base of comparison (across equally advantaged institutions) for the most recent time period. The college's self-assessment substantially enhances both the year-to-year information and the peer group information by identifying the unique factors of a college that affect its performance. The college demographic profile, in turn, supplies a unique snapshot of the college's service population, information that local officials can use to evaluate community access and the overall enrollment picture.

These six pages for each college deliver the essence of the ARCC's objective for local accountability. Ideally, each college's local governing board and local community will use this package of information for data-based policy discussions. This strategy will benefit communities throughout the state because it equips them with data to address their local priorities. To ensure that this process occurs in each community, the legislation for ARCC requires each college to submit to the CCCCO by March 15, 2010, documentation of interaction by each local board of trustees with the 2009 ARCC report.

### Conclusion

This third year of the ARCC effort improves the annual report that provides the State Legislature and the Governor's Office an ongoing, cost-effective structure for performance improvement that respects and promotes local decision-making. All of the state's community colleges have already shared the 2008 report with their own local board of trustees, as required by law, and many college administrations have subsequently begun analyses to leverage the data and findings in the ARCC project. With this second report, the ARCC project continues to further the state's mission in higher education by enabling and prompting college efforts to promote student success.

### **Introduction to the 2009 ARCC Report**

### **Background**

This report on a set of performance indicators for the California Community Colleges (CCC) meets a legislative requirement that resulted from Assembly Bill 1417 (Pacheco, Statutes of 2004, Chapter 581). The details of the legislation appear in Appendix F of this report. For clarity's sake, we have named this reporting system *Accountability Reporting for the Community Colleges* (or *ARCC*). The report itself has the title of "Focus On Results." As required by the Legislature, the CCC Chancellor's Office (CCCCO) will produce this report each year and disseminate it so that each college will share it with its local board of trustees. The Chancellor's Office will also make the report available to state government policymakers and the public at large.

The report's objectives are to make policymakers, local college officials, and elected boards aware of system and college performance in specific areas of effort and to inform the public about overall system performance. Readers will observe that the 2009 report continues to cover noncredit courses as required by Senate Bill 361 (Scott, Statutes of 2006, Chapter 631). Again, this coverage of noncredit outcomes only extends across courses designated as part of the "Enhanced Noncredit" funding. For clarity, this report refers to this group of noncredit courses as CDCP (an acronym for the objective known as Career Development and College Preparation). Readers who want additional details on CDCP performance should refer to a supplemental report that the ARCC staff produce as a follow-up to *Focus On Results*. The CCCCO will issue this supplemental report after it has released *Focus On Results* because of scheduling and resource limitations.

Focus On Results drew upon the contributions of many parties. The framework for ARCC used the expertise of a team of researchers from the Research and Planning Group for the California Community Colleges (i.e., the RP Group), a panel of nationally recognized researchers on college performance, a statewide technical advisory workgroup, and staff at the Chancellor's Office. In Appendix H we list the individuals who played these important roles in helping to formulate the ARCC.

#### **How to Use This Report**

We acknowledge that a variety of people will see this report, and we recognize that these individuals will differ widely in their reading objectives and in their familiarity with the report's topic. With this in mind, we have tried to design the report so that policy makers at both the state and local levels will have a clear presentation of essential performance indicators for the system and for each community college within it. The body of the report emphasizes tables of summary data that provide snapshots of system and college level performance. Readers should read the brief introductions to each of these sections (system and college level) to understand their contents. These introductions cover the framework for ARCC, and they should help most readers to understand the performance indicators cited in this report. Appendix E, which presents a short list of terms and abbreviations, may also help the general reader.

We recognize that researchers, analysts, and college officials will require documentation of the methodology for the performance indicators in this report. Such technical details appear in three of the appendices. Appendix B (methods for calculating the indicators), Appendix C (regression analyses for the peer grouping), and Appendix D (cluster analyses for the peer grouping) specifically address methodological issues, and they tend to require technical knowledge on the part of the reader.

### Introduction to the 2009 ARCC Report

The report's first section covers the system's overall performance over time, and this will help readers to see the broad context of the system's performance. The section that follows system performance presents specific information for each college. The first two pages of college-level tables display how that college performed over time on eight basic indicators. The year-to-year figures for these performance indicators should give readers a good idea of how any given college has done during the past few years, especially in terms of its progress in areas that are generally recognized as critical in community colleges.

The third and fourth pages for each college display basic demographic data for the college's enrollment. This information will help readers understand the student population served by that college. For many readers, such information can indicate relevant aspects of a college's effectiveness (i.e., who does the college serve?), plus it can provide additional context for the reported performance indicators.

The fifth page for each college shows the "peer grouping" information for the college. On this page, readers will find a comparison of a college's performance on each of the seven indicators. For each performance indicator, we have performed a statistical analysis (peer grouping) to identify other California Community Colleges that most closely resemble the college in terms of environmental factors that have linkage to (or association with) the performance indicator. Interested readers should refer to Appendix A to see the names of the colleges that comprise each peer group. We emphasize that the peer group results are rough guides for evaluating college level performance because each college may have unique local factors that we could not analyze statistically for the peer group identification. Because the data from the colleges may have changed since the analysis shown in the 2008 report, colleges may fall into new peer groups in this report. The developmental nature of the indicator for CDCP (or Enhanced Noncredit) courses again compels us to omit college peer-grouping for this indicator.

The sixth page for a college shows that college's own self-assessment, and this brief statement from the college administration may note, among other things, such unique factors that our statistical analysis may have missed. Therefore, readers should carefully review this self-assessment because it may help to explain the performance figures for a college. The ARCC staff in the Chancellor's Office do not edit these self-assessments from the college administrators, and the only requirement for the content is that it stay within a 500-word limit. Because the word limit forces the self-assessment to focus upon a few basic points, some readers may wish to follow-up with a college that may have other analyses or data that it could not include in the ARCC's brief self-assessment.

The best use of this report will require the integration of information from various parts of the report. Judgments about the performance of any particular college should especially pay attention to the sections on year-to-year performance, peer group comparison, enrollment demographics, and the college self-assessment. A focus upon only one of these pieces of information will probably provide an incomplete evaluation of college performance, and this may lead one to make unfair judgments about an institution. Consequently, we hope that users of this report maintain this multi-dimensional viewpoint (from the different report sections) as they draw their conclusions or as they communicate about the report to other people.

### **Introduction to the 2009 ARCC Report**

The 2009 report will contain numerous data changes for past data as well as new data for the most recent academic year. For this reason, analysts should rely primarily upon the 2009 report instead of data from prior ARCC reports. The Chancellor's Office MIS (Management Information System) unit has continued to implement various data improvements that are virtually impossible to complete within a narrow time frame.

Recognizing how important it is to have accurate data, the Chancellor's Office MIS unit offered college districts the opportunity to review and correct their historical course data. In October of 2006, this unit launched a statewide project to clean-up course data that had been reported to the COMIS (Chancellor's Office MIS) system over the years. In conjunction with the clean-up project, much more stringent data quality requirements were implemented especially for basic skills courses. The official course clean-up project concluded in October 2007, but the review and correction process is ongoing. The MIS unit installed a course master file process that allows the colleges to correct their course data whenever they discover a problem. TOP code (CB03), Basic skills status (CB08), and Prior to College Level (CB21) are three COMIS data elements critical to Basic Skills courses. These three data elements are continually being reviewed and corrected by the colleges. As a result of these efforts, data for a performance indicator in the 2009 ARCC report will differ from the figures for the corresponding indicator that appeared in the 2008 ARCC Report.

Additional information about ARCC is available at the following website: <a href="http://www.ccco.edu/OurAgency/TechResearchInfo/ResearchandPlanning/ARCC/tabid/292/Default.aspx">http://www.ccco.edu/OurAgency/TechResearchInfo/ResearchandPlanning/ARCC/tabid/292/Default.aspx</a>

If you have any questions or comments about the report, please e-mail them to: <a href="mailto:arcc@ccco.edu">arcc@ccco.edu</a>.

Blank page inserted for reproduction purposes only.

## ARCC 2009 Report: An Introduction to the Systemwide Indicators

The Accountability Reporting for the Community Colleges (ARCC) framework specifies that community college performance data should be aggregated, analyzed, and reported at two levels: the individual college level (college level indicators) and across the community college system (systemwide indicators).

Tables 1 through 18 and Figures 1 through 6 in the following section of the ARCC report present results for the seven performance indicators chosen for **systemwide** accountability reporting, organized into four major categories:

- Student Progress and Achievement Degree/Certificate/Transfer
- Student Progress and Achievement Vocational/Occupational/Workforce Development
- Pre-Collegiate Improvement Basic Skills and ESL
- Participation Rates

The seven performance indicators presented in this section are:

- 1. The annual number and percentage of baccalaureate students graduating from UC and CSU who attended a California Community College
- 2. The annual number of Community College transfers to four-year institutions
- 3. The transfer rate to four-year institutions from the California Community College System
- 4. The annual number of degrees/certificates conferred by vocational programs
- 5. The increase in total personal income as a result of receiving a vocational degree/certificate
- 6. The annual number of basic skills improvements
- 7. Systemwide participation rates (by selected demographics).

The Data Sources and Methodology for each of the indicators can be found in Appendix B.

The time periods and data sources differ across performance indicators so it is important to pay attention to the dates and information specified in the column headings and titles for each table or figure.

We updated the wage data presented in Figures 6a to 6c and Tables 12a to 12c. The systemwide participation rate is now based on data from the Chancellor's Office Data Mart.

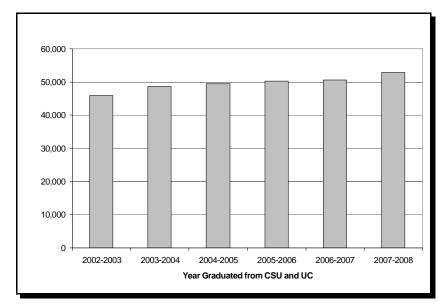

Note that these systemwide indicators are not simply statewide aggregations of the college level indicators presented elsewhere in this report. Some systemwide indicators cannot be broken down to a college level or do not make sense when evaluated on a college level. For example, students may transfer or attend courses across multiple community colleges during their studies and their performance outcomes must be analyzed using data from several community colleges rather than from an individual college.

### Table 3:

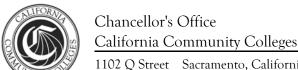

Annual Number and Percentage of UC Baccalaureate Students from 2002-2003 to 2007-2008 Who Attended a CCC

Year Graduated From CSU

	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007	2007-2008
Total BA/BS from UC	37,125	38,579	40,862	41,640	41,587	42,416
Total Who Attended CCC	10,511	11,328	12,123	11,883	11,784	12,488
UC Percent	28.3%	29.4%	29.7%	28.5%	28.3%	29.4%

#### Results

Figure 1 presents an increasing six-year trend of the annual number of California State University (CSU) and University of California (UC) baccalaureate students who attended a California Community College (CCC). Table 1 shows the number of CSU and UC baccalaureate students and the total number of baccalaureate students who attended a CCC. The table also reflects the percentage of graduates who originally attended a CCC across the six-year period. The percentage slightly decreases over time beginning in 2004-2005. Table 2 displays the annual number and percentage of CSU students and Table 3 portrays the UC students.

Student Progress and Achievement: Degree/Certificate/Transfer

Figure 2: **Annual Number of California Community College** Transfers to Four-Year Institutions from 2002-2003 to 2007-2008

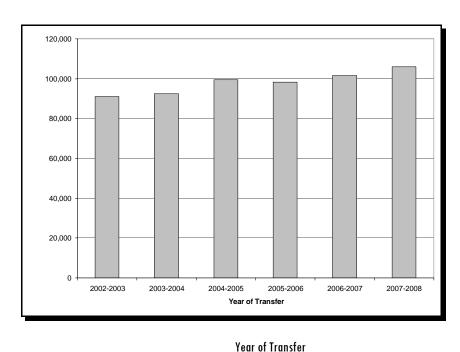

Table 4: **Annual Number of California Community College** Transfers to Four-Year Institutions from 2002-2003 to 2007-2008

	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007	2007-2008
Total Transfers	91,114	92,469	99,450	98,382	101,482	105,957

Table 5: **Annual Number of California Community College** Transfers to California State University (CSU), University of California (UC), In-State Private (ISP) and Out-of-State (OOS) Four-Year Institutions

	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007	2007-2008
csu	50,746	48,321	53,695	52,641	54,391	54,971
UC	12,275	12,539	13,114	13,510	13,874	13,909
ISP	17,038	19,673	20,174	19,530	20,071	23,322
oos	11,055	11,936	12,467	12,701	13,146	13,755

Year of Transfer

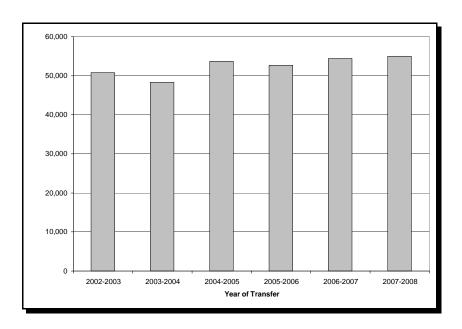

### **Results:**

Figure 2 and Table 4 feature the annual number of California Community College (CCC) transfers to four-year institutions across six years. Although there is a general increase over time, the overall number of transfers declines in 2005-2006 and increases in 2006-2007. Table 5 displays the annual number of transfers for four segments; California State University (CSU), University of California (UC), In-State Private and Out-of-State (OOS) four-year institutions.

Student Progress and Achievement: Degree/Certificate/Transfer

Figure 3: Annual Number of California Community College Transfers to California State University (CSU) from 2002-2003 to 2007-2008

Year of Transfer

Table 6: **Annual Number of California Community College** Transfers to California State University (CSU) from 2002-2003 to 2007-2008

	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007	2007-2008
CSU Transfers	50,746	48,321	53,695	52,641	54,391	54,971

### **Results:**

Figure 3 and Table 6 display the annual number of California Community College (CCC) transfers to California State University (CSU). The number of transfers decreases in 2003-2004, and again decreases in 2005-2006 before increasing in 2006-2007.

Student Progress and Achievement: Degree/Certificate/Transfer

Figure 4: **Annual Number of California Community College** Transfers to the University of California (UC) from 2002-2003 to 2007-2008

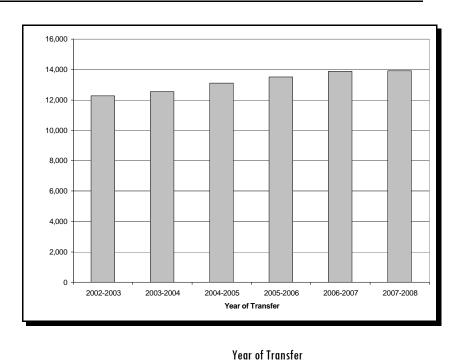

Table 7: **Annual Number of California Community College** Transfers to the University of California (UC) from 2002-2003 to 2007-2008

UC Transfers	12,275	12,539	13,114	13,510	13,874	13,909

### **Results:**

Figure 4 and Table 7 illustrate the annual number of California Community College (CCC) transfers to University of California (UC). The number of transfers increases across the six-year period.

## Student Progress and Achievement: Degree/Certificate/Transfer

Figure 5: **Annual Number of California Community College** Transfers to In-State Private (ISP) and Out-of-State (OOS) Four-Year Institutions from 2002-2003 to 2007-2008

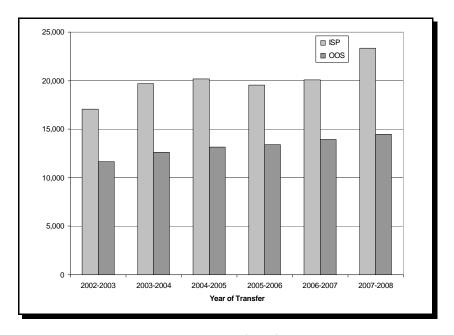

Table 8:

**Annual Number of California Community College** Transfers to In-State Private (ISP) and Out-of-State (OOS) Four-Year Institutions from 2002-2003 to 2007-2008

Y	ear	of	Tr	a	n	sf	er

	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007	2007-2008
ISP Transfers	17,038	19,673	20,174	19,530	20,071	23,322
OOS Transfers	11,638	12,618	13,140	13,399	13,952	14,464

#### **Results:**

The annual number of California Community College (CCC) transfers to In-State Private (ISP) and Out-of-State (OOS) four-year institutions is displayed in Figure 5 and Table 8. The transfer volume increases for ISP four-year institutions, with the exception of 2005-2006. For CCC transfers, the numbers increase over time.

Student Progress and Achievement: Degree/Certificate/Transfer

Table 9: Transfer Rate to Four-Year Institutions Percentage of first-time students with a minimum of 12 units earned who attempted transfer-level Math or English during enrollment who transferred to a four-year institution within six years.

	2000-2001 to 2005-2006	2001-2002 to 2006-2007	2002-2003 to 2007-2008
Transfer Rate	40.9%	40.1%	40.3%

Table 9 reflects the statewide transfer rate to four-year institutions for three different cohorts of first-time students. The cohorts include students who earned at least 12 units and who attempted transfer-level Math or English during the six-year enrollment period. The transfer rate decreases in the 2001-2002 cohort, but increases for the 2002-2003 cohort.

Student Progress and Achievement: Vocational / Occupational / Workforce Development

## Table 10: Annual Number of Vocational Awards by Program from 2005-2006 to 2007-2008 (Program Title based on four-digit TOP Code, Alphabetical Order)

Includes Certificates Requiring Fewer Than 18 Units

### **Results:**

Table 10 shows the numbers of awards issued by 127 vocational programs across the three most recent academic years, organized alphabetically by program title. The columns under "Total Credit Awards" (i.e., columns 2, 3, and 4) are the sums of degrees plus certificates for the specified years. Totals for all programs are presented in the last row of the table. Degrees make up about 36 to 39 percent of the credit awards issued, with certificates making up the remaining 61 to 64 percent.

Student Progress and Achievement: Vocational / Occupational / Workforce Development

## **Results:**

As shown in Table 11, Nursing programs issued the highest total number of awards in 2007-2008 (i.e., degrees plus certificates), primarily in the form of AA/AS degrees. Child Development/Early Care and Education programs issued the second highest total number of awards, primarily certificates, followed by Administration of Justice programs. The highest number of AA/AS degrees was issued in Nursing, followed by Business Administration.

## Student Progress and Achievement: Vocational / Occupational / Workforce Development

60,000 Income (in Dollars) CA Median Household Income 50,000 **CCC Median Income** 40,000 CA Per Capita Income 30,000 20,000 10.000 1995 1996 1997 1998 1999 2000 2001 2002 2003 2004 2005

Fig. 6a: Wages for Students Attaining Award in 2000-2001

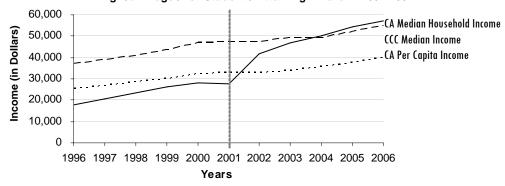

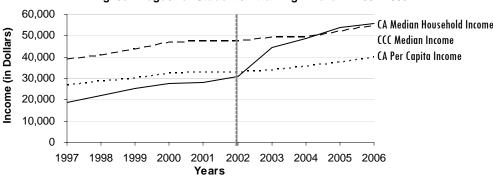

Fig. 6c: Wages for Students Attaining Award in 2002-2003

### **Results:**

Figures 6a, 6b, and 6c represent income trends for students attaining a degree or certificate in (a) 2000-2001, (b) 2001-2002, and (c) 2002-2003. The dashed vertical line in each figure signifies the award year for each cohort. The trend lines for CCC Median Income in Figure 6 (solid line) suggest that students receiving awards from community college programs generally experience wage gains in the years following vocational award attainment for which wage data are available. We include trend lines for California Median Household Income (dashed line) and California Per Capita Income (dotted line) to provide additional perspective.

While there are several important aveats to the CCC Median Incometrends shown in these figures, the lines indicate a noticeable "jump" in median income that occurs following receipt of an award. This jump takes place for all three wage cohorts (2000-2001, 2001-2002, and 2002-2003). The wage trends continue at that higher level across the years for which we have post-award wage data.

For Methodology and Data Source, see Appendix B. The wage data for these figures are updated for the 2009 ARCC Report.

(N = 6.232)(Data for Figure 6c)

	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006
CA Median Household Income	39,000	40,600	43,800	46,900	47,177	47,500	49,320	49,185	51,831	55,000
CA Per Capita Income	26,490	28,374	29,828	32,462	32,883	32,826	33,554	35,440	37,311	39,871
CCC Median Income	18,580	21,930	25,305	27,887	28,087	30,878	44,418	48,966	53,721	55,828

### **Results:**

The income data in Tables 12a, 12b, and 12c above were used to develop the trend lines depicted in Figures 6a, 6b, and 6c of this report. The last data row of each table, CCC Median Income, contains the annual median income for a cohort of students who received any award during a particular cohort year (2000-2001, 2001-2002, 2002-2003). Data on California Median Household Income and Per Capita Income are included to provide additional perspective on the income trends.

For Methodology and Data Source, see Appendix B. Note that wage data in these tables are updated for the 2009 ARCC Report.

Pre-Collegiate Improvement: Basic Skills and ESL

### Table 13:

**Annual Number of Credit Basic Skills Improvements** 

The number of students completing coursework at least one level above their prior basic skills enrollment within the three-year cohort period.

	2003-2004 to 2005-2006	2004-2005 to 2006-2007	2005-2006 to 2007-2008
Number of Students	88,826	88,595	89,696

### **Results:**

As Table 13 indicates, the statewide annual number of students completing coursework at least one level above their prior credit basic skills enrollment coursework declined slightly from the first cohort (2003-2004 to 2005-2006) to the second cohort (2004-2005 to 2006-2007), but has risen slightly in the most recent cohort (2005-2006 to 2007-2008).

## **Participation Rates**

Table 14: Systemwide Participation Rate Per 1,000 Population

	2005-2006	2006-2007	2007-2008
Systemwide Participation Rate	70.5	71.9	74.9

Table 15: Participation Rates by Age Group Per 1,000 Population

	2005-2006	2006-2007	2007-2008
19 or less	57.7	60.2	65.2
20 to 24	266.5	265.6	272.6
25 to 29	133.6	136.3	142.4
30 to 34	80.5	83.3	87.6
35 to 39	61.0	62.1	63.6
40 to 49	48.1	48.2	48.8
Over 50	30.5	31.3	31.5

Table 16: Participation Rates by Gender Per 1,000 Population

	2005-2006	2006-2007	2007-2008
Female	77.3	78.6	81.5
Male	62.0	63.5	66.6

Table 17: Participation Rates by Ethnicity Per 1,000 Population

	2005-2006	2006-2007	2007-2008
Asian	93.9	95.0	96.4
Black/African American	86.5	87.3	92.3
Hispanic	56.4	57.6	60.5
Native American	102.3	102.5	104.1
Pacific Islander	136.2	138.6	149.3
White	56.1	56.6	58.0

Tables 14 to 18 show how the community colleges provide access to higher education for all segments of the state's population. The participants include substantial numbers from all categories of age, gender, and race/ethnicity.

#### **Participation Rates**

Table 18: Participation Rates by Age, Gender, and Ethnicity Per 1,000 Population

Age	Gender	Ethnicity	2005-2006	2006-2007	2007-2008
19 or Less	Fem ale	Asian	100.8	103.9	107.8

#### ARCC 2009 Report: An Introduction to the College Level Indicators

The Accountability Reporting for the Community Colleges (ARCC) framework specifies that community college performance data should be aggregated, analyzed, and reported at two levels: the individual college level (college level indicators) and across the community college system (systemwide indicators).

The following section of the 2009 ARCC report presents results for the performance indicators chosen for **college level** accountability reporting. Colleges and schools of continuing education are organized alphabetically (by college name). However, colleges that have "College of the..." in their titles will be found under "C."

Results for each college are presented in Tables 1.1 to 1.11. The methodology for performance indicators and college profile demographics is found in Appendix B. Tables 1.1 to 1.11 are organized under three main categories: College Performance Indicators, College Profiles, and College Peer Groups.

This year, we extracted demographic data for the college profiles from the Chancellor's Office DataMart. Therefore, the labels for Table 1.10 now match the Data Mart's labels.

College Performance Indicators are further categorized as Degree/Certificate/Transfer, Vocational/Occupational/Workforce Development, and Pre-Collegiate Improvement (Basic Skills, ESL, and Career Development and College Preparation).

The tables present the following draft data for each college:

- 1. Student Progress and Achievement Rate
- 2. Percent of Students Who Earned at Least 30 Units
- 3. Persistence Rate
- 4. Annual Successful Course Completion Rate for Credit Vocational Courses
- 5. Annual Successful Course Completion Rate for Credit Basic Skills Courses
- 6. Improvement Rates for Credit ESL Courses
- 7. Improvement Rates for Credit Basic Skills Courses
- 8. Career Development and College Preparation Progress and Achievement Rate
- 9. College profile summaries, (e.g., headcounts, percentages of student enrollments by various demographics) obtained from the CCCCO Data Mart for the 2009 report; prior ARCC report demographics came from the Chancellor's Office MIS
- 10. Summary of the college's peer groups for each indicator

#### An Introduction to the College Level Indicators

This college level section includes data for each of the colleges in the system at the time of this report, although data for some earlier time periods may be missing for the newer colleges. Most of the college level tables include data for the three most recent academic years (2005-06, 2006-07, and 2007-2008); however, the time periods may differ for a few of the indicators. Thus, it is important to note the years specified in the titles or column headings for the tables.

Because analysts of state level policy often need to know how the entire system has performed on specific indicators, we report the total system rates on the ARCC college level indicators in the table below.

College Level Performance Indicator	State Rate
1. Student Progress & Achievement (2002-03 to 2007-08)	51.8%
2. Completed 30 or More Units (2002-03 to 2007-08)	71.2%
3. Fall to Fall Persistence (Fall 2006 to Fall 2007)	69.2%
4. Vocational Course Completion (2007-08)	77.7%
5. Basic Skills Course Completion (2007-08)	60.5%
6. ESL Course Improvement (2005-06 to 2007-08)	50.1%
7. Basic Skills Course Improvement (2005-06 to 2007-08)	51.2%

The rates in this table use the total number of students in the state that qualified for a specific cohort as the denominator. The numerator likewise uses the total number of outcomes in the state. Analysts should avoid using the rates in this table to evaluate the performance of an individual college because these overall rates ignore the local contexts that differentiate the community colleges. Evaluation of individual college performance should focus upon the college level information that appears on the separate pages that follow. On those pages, Tables 1.1 to 1.11 for each college explicitly enable analysts to evaluate a college in an equitable manner.

## A Note About The Career Development and College Preparation Progress and Achievement Rate (CDCP)

The Career Development and College Preparation Progress and Achievement Rate (Table 1.6), known as the Enhanced Noncredit Progress and Achievement Rate in the 2008 ARCC report, was added to the ARCC report in 2008 as a result of legislation (SB 361, Scott, Chapter 631, Statutes of 2006) that increased funding for specific noncredit courses (see Appendix F).

#### An Introduction to the College Level Indicators

As of this report, we have partial or complete CDCP data for 32 community colleges/schools of continuing education. See Appendix B for a description of the methodology used to obtain data and calculate progress rates for the CDCP indicator and a list of the colleges with CDCP data available for this report.

Given that the CDCP data collection is still in its early stages, there will be no peer grouping for this indicator in the 2009 ARCC. However, colleges with CDCP funding should consider CDCP performance when they prepare their self-assessments for the final ARCC report.

Adding the CDCP Progress and Achievement Rate to the ARCC report also meant adding CDCP performance data and demographic data for schools of continuing education (e.g., Marin Community Education, San Francisco Continuing Education, San Diego Continuing Education, etc.). Because they do not offer programs measured by the other ARCC indicators, Tables 1.1 through 1.5 and Table 1.11 are marked with "NA" (Not Applicable) for schools of continuing education. We have included demographic data for these schools in Tables 1.7 through 1.10.

Blank page inserted for reproduction purposes only.

#### **Compton Community Educational Center**

**El Camino Community College District** 

**College Self-Assessment** 

El Camino College has provided a variety of educational opportunities at its Compton Community Educational Center (Compton Center) since August 2006. Located in southern Los Angeles County, about a 10-minute drive east from El Camino College's main campus, Compton Center sits on an 83-acre campus and serves a population consisting primarily of the African-American and Latino communities of Carson, Compton, Lynwood, Paramount and surrounding areas.

Due to recent challenges leading to the loss of its accreditation, the former Compton College experienced a sharp enrollment decline in 2006-07. However, enrollment increased dramatically in 2007-08, growing by nearly 1,000 students over the previous year. This increase occurred mostly among women and working adults (ages 25-49). A variety of recruitment efforts are underway to attract more male and traditional college-aged students to the campus.

In terms of academic performance, Compton Center rebounded from last year's low point on a variety of measures. Although representing the peer group low, the Center improved its performance modestly on the Student Progress and Achievement Rate. In addition, the percentage of students earning 30 units or more increased by 7 percentage points. Persistence also rebounded, with a much larger percentage of Fall 2006 Compton Center students persisting to Fall 2007—an 11-point gain from the previous year!

Successful course completion in vocational and basic skills courses declined, however. The increase in working adults who often return to college with competing priorities may be a contributing factor. In concert with the main campus, Compton Center is focusing efforts on successful strategies to assist students moving through vocational and basic skills courses. For example, a faculty member with reassigned time has been appointed as the Basic Skills Coordinator to direct the student experience in the Basic Skills area.

ESL improvement rates remain low for at least two reasons. First, the ESL Improvement Rate indicator still spans the period of transition from Compton College to El Camino College curriculum as the right "mix" of courses was developed for Compton. Second, the population of students who enrolls in ESL courses at Compton Center is very different from that at El Camino College and thus requires additional courses not offered at ECC. Low enrollments during the early years of the partnership also prevented students from advancing to higher level courses unless they attended another institution, a tall order for persons of limited English ability. Nonetheless, El Camino College Compton Center acknowledges the need to focus efforts on improvement rates both for ESL and basic skills courses.

In a national survey administered in 2007-08, students rated Compton Center highly on a variety of engagement measures including academic and collaborative learning and student-faculty interaction. Students also valued important infrastructure and services such as computer and skills labs and academic counseling. Despite its continued underperformance, the recent improvements are a sign of promise for stronger performance to come at Compton Community Educational Center.

#### El Camino College

**El Camino Community College District** 

#### **College Self-Assessment**

Located in southwest Los Angeles County, El Camino College (ECC) serves a large, urban population at its main campus in Torrance as well as its center in Compton which opened in fall 2006. The College's service area is diverse and vibrant with a growing Latino community. ECC likewise has experienced continued growth in its Latino student population, the largest single ethnic group.

El Camino College provides comprehensive educational opportunities, serving career-oriented, vocational and transfer students. ECC offers hundreds of programs and numerous majors across eight academic divisions along with abundant opportunities for student involvement. ECC is among the top California transfer colleges.

Enrollment at ECC rebounded in 2007-08, with a 3,000-student jump in headcount. The percentage of younger students (19 or less) grew more than the working adult populations.

In terms of ARCC performance indicators, the most recent year shows increases across three measures, declines on two measures and stable rates for two others. The Student Progress and Achievement Rate has declined but remains above the peer group average. The percentage of students with 30 or more units increased last year but is below the peer average. Efforts are currently underway to address potential barriers such as class schedule conflicts and sufficient offerings in gateway courses.

Persistence of ECC students remains well above its peers. Vocational course success grew slightly but is lower than other peers. Retention strategies implemented recently for traditional and vocational students such as a new student welcome day, learning communities and interactive classroom technologies have already contributed to increased student engagement and chances for success.

Basic skills course success is down in the current year and is below the group average. More than one-third of ECC students place into basic skills English or math courses. ECC has taken a variety of steps to provide effective academic support for these students. The Basic Skills Task Force supports the application of best practices in basic skills and some approaches have already been implemented. In addition, a large-scale computer lab and learning support center for basic skills students is part of the new Learning Resources Center. A new Humanities building supports students with "smart classrooms" and additional lab facilities. These and other efforts should help improve ECC's performance on basic skills measures in the future.

Finally, ESL course improvement experienced an 11-point jump in the most recent year. ECC is also the peer group high on this measure. ESL faculty have been very involved in setting and evaluating student learning outcomes in their courses. Their efforts may be paying off with better performance rates and progress into higher courses.

In a national survey administered in 2007-08, students ranked ECC above average on academic challenge, active and collaborative learning and support for learners. Students were also highly favorable towards their relationships with faculty. Support programs that received high marks included English and math skills labs, computer labs and academic counseling. ECC prides itself on being an institution of strong academic rigor and high-quality student support.

#### Introduction

This appendix contains additional information about the composition of the peer groups that the main report cites in the college level analysis (Table 1.11: Peer Grouping). There is one table for each of the seven performance indicators. For information about the peer grouping methodology, we refer readers to Appendix D, which gives the essential statistical specifications for the ARCC peer grouping. For information about the analysis that preceded and supported the peer grouping process, we refer readers to Appendix C, which documents the regression analyses that the Chancellor's Office research staff used.

Appendix A should help readers by presenting them with four types of information. The first type of information is the average value for each of the uncontrollable factors (labeled as "Means of Predictors") that theoretically influence a given performance indicator in the ARCC. We show these averages for each peer group in the second, third, and fourth columns (reading from the left) of each of the seven tables in this appendix.

The second type of information is the basic statistical summary of the performance indicator (the lowest rate, the highest rate, and the average rate) within each peer group. These figures appear in the three columns to the right of the shaded border in each table. The third type of information concerns the composition of each peer group. The two rightmost columns of each table display the number of colleges within each peer group as well as the names of the colleges within each peer group.

Finally, the fourth type of data is the state level figure for each of the uncontrollable factors and performance indicators. These state level figures appear in the last row of each of the tables in this appendix. Each statewide average in the last row is calculated as the sum of individual college values for that predictor or for that performance indicator (as specified by the column heading) divided by the number of colleges for which data were available for that predictor or performance indicator. For example, looking at Table A4, the statewide average for the predictor "Pct Male Fall 2007" is the sum of the percentage of males at each college in Fall 2007 divided by 110, where 110 represents the number of colleges for which those data were available. Similarly, the statewide average for Vocational Course Completion Rate in Table A4 is the sum of the Vocational Course Completion Rate for each college divided by the 110 colleges for which this rate was available.

The statewide averages reported in Appendix A differ from the system averages that we present in the Introduction to the College Level Indicators (Introduction) because the averages in the Introduction use student-level data rather than college-level data. For reporting how the system has performed on an indicator, analysts should use the system averages that appear in the Introduction to the College Level Indicators. For comparing how a peer group has done with respect to all of the colleges in the state, analysts should use the statewide averages that appear in Appendix A.

Users of this report may use these four types of information to help them establish a context for interpreting the peer group results in the main body of the report. The information about the uncontrollable factors, the performance indicators, and the peer group composition allows the user to weigh these different aspects of the peer grouping as they try to evaluate college performances.

Finally, we note some specific details for clarity's sake. The leftmost column of each table displays codes such as "A1" or "E5." These codes signify only a different peer group for each performance indicator. The letter in the code (A through G) denotes the specific performance indicator, and the number in the code (1 through 6) denotes a specific group of colleges for a specific performance indicator. Users should avoid attaching any further meaning to these codes. That is, the colleges in group "A1" are not higher or better than the colleges in group "A2" (and vice versa). In addition, the codes are not comparable to those in previous ARCC reports. For example, group "B4" in this report differs from group "B4" in the 2008 ARCC report. We used this coding convention to facilitate the cross-referencing of results in the main report's college pages to this appendix and nothing more.

Users should also remember that the composition of each peer group resulted only from our statistical analysis of the available uncontrollable factors related to each outcome. Therefore, the peer groupings may list some colleges as peers when we customarily would consider them as quite dissimilar. For example, we often consider geographic location and level of population density as factors that distinguish colleges as different (or similar). So, in Table A1 users may note that our peer grouping for Student Progress and Achievement classifies Shasta as a peer for San Jose City, and this tends to clash with our knowledge of the high density setting of the Bay Area and the rural northern California setting of Shasta. However, population density and geographic location within the state are not predictors of this outcome in our statistical analyses (see Appendix C). Furthermore, our historical perception of similar colleges tends to rely upon many controllable factors (which we do not consider in our peer grouping procedure), and this perception can also make the reported peer groups seem counter-intuitive.

For some performance indicators, a few colleges will lack a peer group. This is indicated by missing values in Table 1.11. Also, for some colleges, there may be a peer group but no figure for a particular indicator. Both situations occurred in the ARCC peer grouping analysis as a result of insufficient data at the time of this report's release. Naturally, some of these situations relate to newly established colleges that lack the operating history to produce sufficient data for the ARCC analyses.
