

El Camino College Compton Center

Enrollment Growth and Academic Course Performance: Traditional vs. Distance Education Courses, 2014–2015

Introduction

This study chronicles the recent growth of online course offerings and enrollments at El Camino College Compton Center (COM) and compares academic performance in these courses with their traditional classroom counterparts. While past studies have focused on single semester offerings, this study compares Fall and Spring terms respectively. Like terms (spring to spring rather than fall to spring) are used because scheduling patterns and faculty course loads are more likely to follow similar patterns. This gives a better indication of the growth or change in Distance Education (DE).

Student Demographics

Before discussing the academic performance of students in DE courses, it is important to know who these students are. Figure 1 shows the basic demographic data for the 1,511 students who enrolled in a DE course during the Fall 2014 term. Distance Education students are largely female. More than 3 out of 4 DE students are women. Most of the students are enrolled in less than 12 units for the term. In terms of age and ethnicity, DE students are very similar to the overall student population of the Compton Center. The major races/ethnicities are all within a few percentage points of the campus population. However, it is important to note that there is higher percentage of African-American students and a lower percentage of Hispanic students taking online courses compared to the campus overall. 48% of those enrolled in DE courses are in the typical college going age range of 18 to 24 years. Another 22% are between 25 and 39 years old. For the most part, DE students represent the same population as overall campus students with the exception of gender. The breakdown of gender by ethnicity and age can be examined in Figure 2. The demographic data presented shows one semester but similar results can be seen over time. Figure 3 focuses on DE student enrollment patterns. 51.9% of DE students took on campus courses concurrently, which shows that a majority of online students are also on campus during the semester. Spring 2015 demographics are located in Appendix A.

Enrollment Pattern	Percent
Patterns for Current Semester	
Took Both DE and On Campus courses	51.9%
Patterns for Previous Semesters	
Took DE courses previously	50.3%

ENROLLMENT GROWTH

Distance education offerings have stayed level overall. Only small increases and decreases can be seen in departments, courses, and sections offered from semester to semester. This movement also affects the amount of FTES, which were lower in 2015 than in 2011, although not by much. The Spring semesters have shown similar trends.

ACADEMIC PERFORMANCE

This section addresses the academic performance of students in online courses. Metrics for assessing academic performance include the success and retention rates of students taking distance education courses. First, success and retention comparisons for the El Camino College Compton Center distance education program are compared with the overall state rates. Success and retention rates have been further broken down by gender, ethnicity, and age. In addition, tables showing gaps between these groups and the overall DE retention and success rates are located in Appendix C. Tables for veteran or foster youth status are included in Appendix C. Next, success rates are compared for courses which are offered in both traditional and distance modes. These side by side comparisons have been clustered by academic division and disaggregated by course.

Hybrid Course Performance

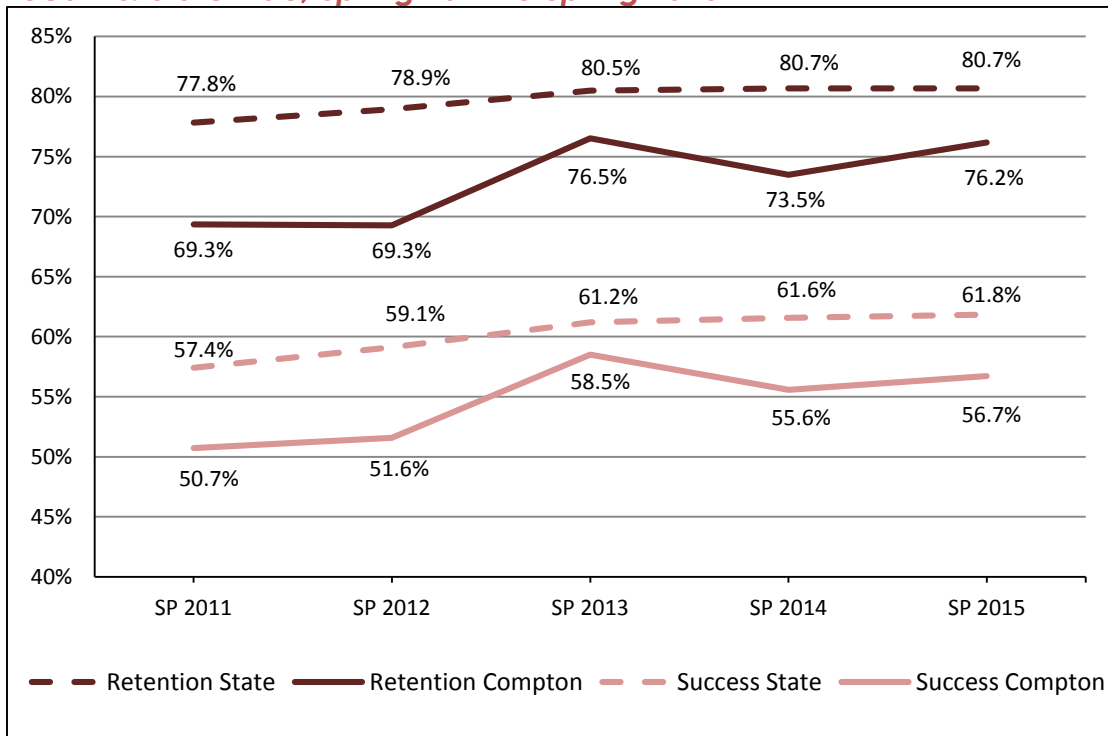

Due to the increase of hybrid courses offered, their success and retention rates were compared to those of fully online courses (not shown). The data suggests that hybrid course students perform at the same level or slightly below that of fully online course students. It is important to note that the same courses are not offered in hybrid and online sections so the comparisons are not of the same course for each medium but of all hybrid and all fully online courses. For example, hybrid courses are largely mathematics courses.

Figure 10 illustrates the comparison between local success and retention rates with those of the state for all distance education offerings for Fall. The California Community College Chancellor's Office defines success rates as the percentage of students who receive a grade of A, B, C, or P. Retention rates are the percentage of students who stayed in the course until the end, thus did not receive a notation of DR or W. Figure 10 shows the success rates for distance education in the state have remained around 60% from Fall 2011 to Fall 2015. The success rates for Compton increased over 8% from Fall 2011 to Fall 2012 but stayed below the state success rate From Fall 2013 to Fall 2015. The same can be said for retention rates. The state rate has been consistent at about 80%. The Compton rate peaked during Fall 2014 but has stayed around 75%.

Figures 18 and 19 examine students' academic performance in online vs. traditional classes in terms of successful course completion (success rate) and retention in the course. The difference in rates is found in the columns at the right where negative differences indicate traditional courses are performing better and bold shaded numbers show courses where online sections have better outcomes. Only outcomes that showed a difference of 3% or greater were highlighted.

There are some noticeable differences in outcomes for individual courses which are taught both online and on campus. Many courses show traditional courses perform better than their online counterparts. Examination of the charts shows some very large differences in outcomes for certain classes, departments, or divisions. For example, students taking the SOC or PSYC courses online were up to 24% more successful than those taking the traditional course. However, semester to semester fluctuations are present. Courses that show negative differences during the Fall may be positive in the Spring or vice versa. Further examination would need to be done in order to investigate commonalities in the courses with large differences in outcomes. On the surface, there does not seem to be any links. Graphic representations of the success rate comparisons for each course are available in Appendix C.

In order to make a comparison of the academic rigor of online courses in comparison with traditional courses, improvement rates are commonly used. If a student completes one level of a sequence and then completes the next level of the sequence with a passing grade, it is considered *improvement*. The presumption is the lower course in the sequence should prepare a student for success in the next level of the sequence. If the academic rigor of online courses is comparable to the academic rigor of traditional courses, there should be little difference in the success rates for the second course when comparing outcomes based on whether the first course was taken online or on campus.

Since not every course must be followed by another, only courses that serve as prerequisites have been tracked. However, because students are not required to take the follow-up course, students who did enroll in the follow-up course for the first time during the 2014-2015 school year were reverse tracked to determine whether the prerequisite course was taken online. Nine of these courses had students enroll in the subsequent course during 2014-2015. The success rates for these courses have been calculated based on the mode in which the prerequisite course was taken. A comparison of these rates is found in Figure 20 below.

The number of students in the 2014-2015 year who took their prerequisite course online is too small to make any definitive statements but some of the trends are worth investigation. However, courses with larger populations, such as ENGL-1A, could be looked into further to examine underlying factors.

Figure 20. Improvement Rates by Prerequisite Course Online vs. Traditional Courses (Selected Courses), 2014-2015

Course	Online		Traditional	
	Total	%	Total	%
CDEV-103	26	73.2%	146	64.4%

CONCLUSION

Distance Education offerings have stayed mostly level over the last five years after peaking in 2011. Overall, the success and retention rates for online offerings have remained steady and were on par with state distant education rates for Spring 2011. There are some courses where the outcomes are much lower in online sections compared to on campus sections. In these instances, divisions might want to review the course material as well as the online resources and presentation to see if they are compatible with positive online implementation. In instances where they are not, online instruction may need to be revised or abandoned altogether. Likewise, it is important that these classes properly prepare students for subsequent courses. It might be necessary to review these course sections to ensure students are receiving the proper preparation needed to succeed in future courses.
