## UC and CSU Transfer Counts

### CPEC vs. NSC

---

Prior to the defunding of the California Postsecondary Education Commission (CPEC), many California community colleges including El Camino College (ECC) relied on CPEC for UC and CSU transfer data. CPEC's sources of data were the UC and CSU system offices. Since the transfer destinations provided the data, CPEC was the primary resource for ECC transfer numbers. After 2009-10, however, CPEC closed its doors, which prompted the exploration and use of data from National Student Clearinghouse (NSC), an organization that verifies student enrollment. The following report outlines CPEC and NSC transfer counts and the differences between the two sources.

### Methodology

To better understand the differences between CPEC and NSC data, this section provides a brief outline of the methodology used to obtain NSC transfer counts. Similar to CPEC, NSC also relies on four-year institutions' reports. However, NSC tracks students based on a list of students submitted. With this approach, the Office of Institutional Research and Planning (IRP) is able to submit two separate lists of ECC and Compton Center students and track their educational journey prior to and beyond ECC. Students are counted as transfers if they (1) did not previously obtain a four-year degree, (2) did not attend a four-year institution during the two years prior to the transfer term of interest, and (3) did not enroll in any four-year institution prior to attending ECC. These three criteria exclude reverse transfers, which is the enrollment of students at ECC after they previously attended a four-year institution.

To approach a more accurate reflection of transfers from each location, the new methodology counts students at each institution where enrollment in the academic year prior to transfer term exists. Additionally, students must earn at least 12 units across ECC and Compton Center to be counted as transfers. This unit threshold helps exclude students who "drop in" to complete one or two courses and most K-12 Special Admit students. Because students can be counted at both ECC and Compton Center, this methodology yields duplicated counts, as would occur with data for any two colleges.<sup>1</sup>

### Reporting Differences: CPEC vs. NSC

Table 1 outlines the total unduplicated transfer counts for El Camino College and the Compton Center by academic year and data source. Counts for the two campus locations

---

<sup>1</sup> IRP originally proposed a methodology that utilized Compton cohorts to identify unique ECC and Compton Center transfers. However, this method inflated counts for Compton and undercounted ECC data, particularly because of the high rate of cross-over enrollment between the two locations.

are combined and unduplicated in order to highlight the difference between the two data sources. The percentage difference between CPEC and NSC counts is provided in the column labeled “Difference.” Negative percentages indicate CPEC counts are greater than NSC counts. A higher percentage connotes a larger difference between the two data sources.

**Table 1. El Camino College and Compton Center Unduplicated Transfer Counts by Source**

Year	CPEC*	NSC	Difference
2007-08	1,624	890	-45%
2008-09	1,411	1,021	-28%
2009-10	1,300	995	-23%
2010-11	1,574	1,089	-31%
2011-12	1,434	1,183	-18%

\*In 2009-10, funding for CPEC ceased. Beginning in 2010-11, UC and CSU counts were collected from the UC Office of the President and CSU Analytic Studies, respectively.

Over the past five years, CPEC or four-year system offices had higher transfer counts compared to NSC. The differences may be attributed to methodological differences between the two data sources. Four-year system offices count all students who transfer in a given term. Some of these students may not have attended ECC or Compton during the academic year preceding the transfer term. NSC, however, counts only students who were enrolled at ECC or Compton Center during the preceding academic year. Additionally, the UC system office recognizes the transfer source institution as the community college where students most recently attended. Consequently, some students included in the CPEC counts may have less than 12 units whereas NSC includes only students with 12 or more combined units.

Methodological and technical issues surrounding NSC may also attribute to the count differences. NSC cannot match data based on universal student identifiers but instead must link data using students’ first names and birth dates. This limitation along with students’ ability to request privacy according to the Family Education Rights and Privacy Act (FERPA) yield a five-year average mismatch rate of 17% and 18% for ECC and the Compton Center, respectively. Over the course of years, however, the difference between CPEC and NSC counts has progressively decreased.

### **Compton Transfers**

During the course of gathering comparison data using different methods of counting transfers, it was discovered that many Compton transfers were falsely attributed to ECC due to the methodology used by the UC and CSU system offices. Table 2 highlights the differences in CPEC and NSC counts by campus location.

**Table 2. CPEC and NSC Differences by Campus Location**

Year	CPEC		NSC*	
	ECC	Compton	ECC	Compton
2007-08	1,519	105	830	87
2008-09	1,327	84	1,021	99
2009-10	1,248	52	993	160
2010-11	1,538	36	1,076	290
2011-12	1,406	28	1,182	381

\*NSC counts by campus location are duplicated.

Investigation of these discrepancies revealed that the UC system office recognizes Compton Center students as ECC students. The CSU system office considers students as ECC transfers if they completed most of their transferrable units at ECC. Because of the partnership, Compton Center students earn ECC-attributed units. As a result, four-year institutions identify Compton transfers as ECC transfers, thereby inflating ECC transfer numbers and suppressing Compton numbers. These counts were in turn reported by CPEC or state institutions, which explains the large differences in reported numbers by source outlined in Table 2.

For Compton Center, CPEC counts included only students who began their studies at Compton College prior to the partnership. Therefore, the previous methodology did not accurately capture Compton transfers. Consequently, NSC is the most reliable source for transfer data.

## **Conclusion**

Despite the fact that transfer data is readily available from the UC and CSU transfer offices, IRP will report only NSC data for all future transfer-related reports so that Compton counts are accurately reflected. This information affects current grants that incorporate CPEC transfer data. Objectives, however, have been revised to reflect NSC data with no negative consequences for the grants. Other information not affected by this information includes ARCC report outcomes and transfer velocity data produced by the Chancellor's Office. Transfer data in IRP's reports, such as the Factbook and Reported CSU/UC Transfer Counts, will be revised to reflect more accurate NSC transfer data.
