BP 3340 - Energy and Sustainability.

Water management at new and existing buildings encourages:

- Installation of low-flow plumbing fixtures (i.e. faucets, toilets, etc.)
- Installation of water sub-meters, where possible, on irrigation and cooling tower supply lines
- Selection of plants and trees that require low water use
- Avoidance of over-watering grounds and landscaping areas, thereby decreasing water waste
- When spray irrigating, the water should not directly hit the building

These regulations are not intended to be all-inclusive, and they may be modified for local/new conditions.

Water management is a part of the goals and objectives recommended in Compton College's Comprehensive Master Plan.
